

International Network of
VENous Thromboembolism
Clinical Research Networks

2022 Dragons' Den Competition

Deadline to Submit: Extended to June 8, 2022

Rationale

Clinical studies, and especially randomized controlled trials (RCT), frequently require international collaboration and participation from multiple clinical centers to meet sample size requirements in a timely manner. Conducting clinical research in multiple countries offers the advantages of faster participant recruitment and study completion, and greater generalizability of results.

INVENT aspires to be the international driver and accelerator for patient-oriented, investigator-initiated clinical venous thromboembolism (VTE) research and aims to be the key facilitator for international collaboration among VTE clinical investigators.

Competition

Date: July 12, 2022

Time: 12:00-13:00 (UTC / GMT)

Location: ISTH 2022

INVENT will be hosting a public competition for INVENT Study Endorsement & Funding on July 12, 2022 - 12:00-13:00 UTC / GMT at ISTH 2022 in London, UK with an online simulcast (i.e., hybrid event).

Applicants are invited (see '**Eligibility**' and '**Application Process**' below) to present a proposal of their research study to potentially be endorsed by the INVENT network and/or be awarded an International Collaboration grant.

One study will be offered a \$40,000 (CAD) International Collaboration grant. A \$20,000 (CAD) grant will be awarded to the second highest rated application.

How it works:

1. **New:** Selected applicants will be invited to provide a 5-minute pre-recorded "elevator" pitch about their clinical thrombosis-related study.
2. The videos will be posted in advance on our website and social media channels.
3. Each video will be presented at the event to our INVENT Dragons; three prominent international clinical trialists who will ask probing questions to each presenter geared towards determining if the proposed study is well designed, feasible, and will be practice-changing while the audience votes on the study's potential to change practice.

**International Network of
VENous Thromboembolism
Clinical Research Networks**

4. Approximately one week later, the INVENT Council, based on an independent review process, will vote on the winners. Applicants may still receive endorsement even if they are not awarded any prize money.

Eligibility

- **Applicants:** The proposed study must be supported/developed by members of two or more [INVENT national VTE research network members](#). Applicants must be committed to international collaboration, ethical research practices, and fair recognition of co-investigators' research contributions.
- **Study stage:** Research at any stage of development is eligible for endorsement by the INVENT Network. Investigators may apply for approval a preliminary protocol, a study with a fully developed protocol, or one that is actively recruiting participants.
- **Research design:** Academically-driven clinical research studies that are seeking to recruit participants in multiple countries must be one of the following designs:
 1. Randomized controlled trial (RCT) or a pilot trial to inform an RCT;
 2. Quasi-experimental (non-randomized) study evaluating a treatment, intervention, management strategy or diagnostic strategy. Participants in one or more groups are managed uniformly as prescribed by the protocol, with a specific hypothesis, e.g. "risk of recurrent VTE will be less than 2% over 90 days if using this strategy".
- **Competing studies:** Ideally, the proposed study is unique and does not replicate or compete with an ongoing study. Applicants are expected to make efforts to identify other studies that are in progress that are seeking to answer the same or a similar research question. Justification for undertaking a similar study must be provided.

Application Process

The applicant sends an application package consisting of the following documents:

1. A completed [INVENT Study Endorsement Application form](#)
2. A completed [one-page structured study summary \(as per suggested template\)](#)
3. Full study protocol (in whatever form is available at time of application)¹
4. A letter or e-mail from the Applicant's National Network indicating national support for the study.

Deadline for Applications: Initially May 20, 2022 – Extended to June 8, 2022

Please send complete applications to info@invent-vte.com.

¹If only a preliminary proposal is being submitted for consideration, it is not necessary to submit a full protocol.

Study Endorsement

All studies presented at the Dragons' Den competition will be subjected to the INVENT study approval process intended to identify studies that align with the Network's aspirations and which the Network will endorse. The formal review process (see '**Review and Approval Process for Study Endorsement**' below) provides a mechanism for INVENT Council Members to jointly determine which applicants will be invited to participate in the Dragons' Den competition, and which studies the network will eventually promote and support, as well as select for an international collaboration grant.

Review and Approval Process for Study Endorsement

1. The INVENT Staff and Chair conduct an initial review for completeness, clarity, and eligibility.
 - The proposal may be sent back to proponents for refinement/comments/questions prior to review and endorsement.
2. Upon approval by the Chair, the INVENT Staff circulates the application via email to two main reviewers.
 - Both reviewers will complete the INVENT study endorsement evaluation form.
 - The first reviewer should provide a thorough critique of the study and may review the full protocol if they judge it to be necessary to have complete understanding of the study.
 - The secondary reviewer may provide additional comments and critique to the first reviewer's evaluation.
3. Once the main reviewers have completed their evaluations, based on mean review scores (cut-off is 7 out of 10), the application will either be rejected or be circulated to the full Council with the study summaries for review and commentary (if any).
4. Eligible applicants may be invited to present at the Dragons' Den competition. INVENT reserves the right to limit the number of applicants that will be invited to participate in the Dragons' Den event and hence be eligible for the International Collaboration grant. However, all complete and eligible proposals will be considered for INVENT endorsement.
5. At an INVENT Council Meeting to follow the Dragons' Den competition, a full Council vote will be conducted to establish support for the study and approval for endorsement. The vote may occur at an INVENT Council Meeting (teleconference or in-person) or votes may be cast electronically (e.g. by email response or digital poll). The top ranked study will be offered a single \$40,000 International Collaboration prize. The second highest rated study will be offered a \$20,000 prize.
6. INVENT Council will be given a minimum of 7 days to review before casting a vote.
7. All Council members may vote, in-person, by electronic means, or by proxy, to approve a study, regardless of their involvement or interest in the study. For the voting process, quorum is 30% (in-person or by proxy) and a majority vote in one where more than half of the members of Council present and voting vote in the affirmative.

VENous Thromboembolism
Clinical Research Networks**

Post-Approval Procedures

1. Applicants requesting approval of a research idea or preliminary proposal are expected to provide additional study details once the proposal is developed. Studies that have already received approval will not require formal review again.
2. If a pilot study is endorsed by INVENT, the subsequent full study/trial of a similar design will not require formal review by Council. A structured summary describing the full study (as per template) is to be submitted by the principal investigator to info@invent-vte.com. The Chair or Vice-Chair will confirm INVENT's endorsement of the full trial.
3. INVENT support is to be acknowledged in publications and presentations as follows: *The International Network of Venous Thromboembolism Clinical Research Networks (INVENT) endorsed and supported this study.*

INVENT Support of Endorsed Studies

1. A letter of endorsement will be provided (upon request, the letter may be tailored to include in a funding application, etc.).
2. A study summary will be posted on the INVENT website (lay summary encouraged).
3. The study will be promoted to members via e-mail and social media platforms.
4. Endorsed studies will have access to INVENT resources, e.g. use of adjudication platform at "academic rate."
5. INVENT Council Members will actively promote endorsed studies within their national networks.

Application Submission Checklist

Please use the following checklist to ensure you are submitting all the required materials with your application.

- Study Endorsement Application
- One-page structured Study Summary
- Full Study Protocol
- Written documentation demonstrating support of the study from your National Network

Send your completed application to info@invent-vte.com with subject line:
"Dragons' Den Competition Application: Name of Study"
